

 ESOT-Invest d.o.o. Celje	QUALITY POLICY AND ENVIRONMENTAL MANAGEMENT	OB.5.2-1 Issue Nr. 2 September 2018 <hr/> Page 1/1
--	---	---

Quality policy and Environmental Management

- We enable traceability to any business process and activity that takes place at every level of business and throughout the life of projects, regardless of whether they are complex projects or whether it is a process of selling a merchant product.
- We are aware that only a well-organized business system guarantees the quality of services and supplies.
- We are looking for the best solutions for projects that have less impact on environment and reduce the risks of safety and health. Broadly educated colleagues transfer the best technological and developmental discoveries into practice.
- In working processes and environments, we ensure quality through a planned and harmonised operation of all employees by creating opportunities and atmosphere for working cooperation and motivation for creative work.
- When searching for our technologically-technical solutions and equipment that we are manufacturing and installing, we act in accordance with the applicable standards. Installations and service are performed with quality and in time.
- Our vision is to become a successful, stable and market-oriented company focused on the environment and the rational use of natural and human resources.
- Our quality and environmental management system is maintained at the appropriate level of ISO 9001 and ISO 14001 standards.
- We are constantly improving our work system.
- We transfer our quality and environmental management policy to partner companies and key suppliers to establish and implement systems in accordance with the quality and environmental management standards.
